#### NOTICE OF OPEN MEETING

Notice is given that a **Regular Meeting** of the Board of Directors of the Barton Springs/Edwards Aquifer Conservation District will be held at the **District office**, located at 1124 Regal Row, Austin, Texas, on **Thursday**, **October 6**, 2016, commencing at 6:00 p.m. for the following purposes, which may be taken in any order at the discretion of the Board.

Note: The Board of Directors of the Barton Springs/Edwards Aquifer Conservation District reserves the right to meet in Executive Session at any time during the course of this meeting to discuss any of the matters listed on this agenda, as authorized by the Texas Government Code Sections §551.071 (Consultation with Attorney), 551.072 (Deliberations about Real Property), 551.073 (Deliberations about Gifts and Donations), 551.074 (Personnel Matters), 551.076 (Deliberations about Security Devices), 551.087 (Economic Development), 418.183 (Homeland Security). No final action or decision will be made in Executive Session.

- 1. Call to Order.
- 2. Citizen Communications (Public Comments of a General Nature).
- 3. Routine Business.
  - a. Consent Agenda. (Note: These items may be considered and approved as one motion. Directors or citizens may request any consent item be removed from the consent agenda, for consideration and possible approval as a separate item of Regular Business on this agenda.)
    - 1. Approval of Financial Reports under the Public Funds Investment Act, Directors' Compensation Claims, and Specified Expenditures greater than \$5,000. Not for public review
    - 2. Approval of minutes of the Board's September 22, 2016 Regular Meeting and Work Session. Not for public review at this time
    - Approval of issuing the earned Conservation Credits to permittees for FY 2016.
       Pg. 16
  - b. General Manager's Report. (Note: Topics discussed in the General Manager's Report are intended for general administrative and operational information-transfer purposes. The Directors will not take any action unless the topic is specifically listed elsewhere in this agenda.)
    - 1. Standing Topics.
      - i. Personnel matters and utilization
      - ii. Upcoming public events of possible interest
      - iii. Aquifer conditions and status of drought indicators
    - 2. Special Topics. (Note: Individual topics listed below may be discussed by the Board in this meeting, but no action will be taken unless a topic is specifically posted elsewhere in this agenda as an item for possible action. A Director may request an individual topic that is presented only under this agenda item be placed on the posted agenda of some future meeting for Board discussion and possible action.)
      - i. Review of Status Update Report at directors' discretion Pg. 20
      - ii. Update on GMA and regional water planning

- iii. Update on District grant projects and other Aquifer Science Team projects
- iv. Update on activities related to area roadway projects
- v. Update on the HCP/ITP application and the associated draft EIS
- vi. Updates on Board committee activity
- vii. Update on interim legislative activity

#### 4. Discussion and Possible Action.

- a. Discussion and possible action related to setting the FY 2017 District Goals. Pg. 27
- **b.** Discussion and possible action related to setting the FY 2017 performance objectives for the General Manager. **NBU**
- c. Discussion and possible action related to the Travis County portion of the Hill Country Priority Groundwater Management Area (PGMA). Pg. 33
- d. Discussion and possible action related to the City of Dripping Springs TPDES permit application to authorize direct discharge of treated wastewater to Onion Creek in the contributing zone of the Barton Springs segment of the Edwards Aquifer. Pg. 63

#### 5. Adjournment.

Total Conservation Credits \$20,239.09 City of Austin Portion (60%) \$12,143.45 \$32,382.54 Total Overpumpage Fees \$45.42 Net Total \$32,337.12

<sup>3</sup>Overpumpage fees less than \$10 00 are not charged

#### **Routine Business**

#### b. General Manager's Report.

Note: Topics discussed in the General Manager's Report are intended for administrative and operational information-transfer purposes. The Directors will not deliberate any issues arising from such discussions and no decisions on them will be taken in this meeting, unless the topic is specifically listed elsewhere in this as-posted agenda.

#### 1. Standing Topics.

- i. Personnel matters and utilization
- ii. Upcoming public events of possible interest
- iii. Aquifer conditions and status of drought indicators

#### 2. Special Topics.

Note: Individual topics listed below may be discussed by the Board in this meeting, but no action will be taken unless a topic is specifically posted elsewhere in this agenda as an item for possible action. A Director may request an individual topic that is presented only under this agenda item be placed on the posted agenda of some future meeting for Board discussion and possible action.

- i. Review of Status Update Report at directors' discretion
- ii. Update on GMA and regional water planning
- iii. Update on District grant projects and other Aquifer Science Team projects
- iv. Update on activities related to area roadway projects
- v. Update on the HCP/ITP application and the associated draft EIS
- vi. Updates on Board committee activity
- vii. Update on interim legislative activity

| Limited Production Permits (L.P.9.)             | KBE, VE, SD     | 9/30/2016 | Amual Meter Readings  | Sept I was the due date for when meter reading forms are due to the Distret. In the past LIPs were to submit meter reading forms on a monthly basis, but will the recent rule change the District relaxed that requirement to annual basis. Sinff has received approximately 80 of the 115 LPP meter readings. Sinff took the time to reach out by phone or email with the current contact Information with our information with our information on file. Sinff resent out a group of feters with current mailing information with our information on file. Sinff resent out a group of feters with current mailing information from the county parcel data and have provided a short extension. As of right now about 35 well owners have not complied and regulatory team staff has plans to go out on site visits to collect those meter reading where possible and charge 550 involces to the well owners. |
| Temporary/ Regular Permits                      | KBE, VE, SD     | 9102/06/6 | Conversion of a Temporary Permit to a Regular<br>Permit   | Needmore Water LLC is currently a Temporary Permit that is being prepared for administrative completeness and public notice. A public hearing date is still to be determined.  |
| Gofarth WSC                                     | KBE, VE, SD     | 9/30/2016 | Replacement Well  | The PWS has submitted an application to drill a new Edwards well to replace a nonfunctioning well. The nonfunctioning well had issues with an obstruction during the replacement of a pump. Goforth plans to plug the old well once the new well has been successfully completed. The Replacement Well Drilling Application was approved by the GM on 8/3/16. Well is currently being drilled.   |
| Aqua Texas                                      | KBE, VE, SD     | 9397016   | Replacement We!!  | The PWS has submitted an application to drill one new Edwards well to replace two isonfunctioning wells in the offline Hummingbird System. The nonfunctioning well had issues with low production and water quality. Aqua plans to play the old wells once the new well has been successfully completed. They also plan to conduct an abbreviated Aquifer Test and Hydrugeological Report. The Replacement Well Drilling Application was approved by the GM on 6/20 fb. The two deteriorated wells have been plugged, the new well has been drilled and completed, and an abbreviated pump test has been conducted.  |
| Electro Parification                            | KBE, VE, SD     | 9/30/2016 | Test Well Pennit - General Pennit   | On 3/15/16 Electro Purification withdraw its Temporary/Regular Pennit application for 30.000,000 gal/yr and submitted a contemporaneous filting of 6 test well permit applications. The applicant submitted an updated aquifer test plan and design in response to staff's request for inforamtion letter on 9/9/16. EP's test well application was approved by the General Manager on 9/2/1/16. EP and District staff have a logistic coordination meeting on 10/3/16. EP and District staff will present information and answer questions of the Buard on 10/2/16.   |

|                                  |               |           |   | General Summary of Procedures  1. Background water levels and water quality sampling data will be collected from specific community monitoring wells prior to acidization? aquifer testing.  2. Acidization begins. 3 wells will be acidized total but one at a time:  o Well will be acidized by injecting 10,000 gal of HCL(28% aqueous solution) into the well into the producing cow creek interval.  o 64,000 gal of water will be flushed into the well via trenumic pipe; well will sit fur 2 days to allow acid reaction to take place.  o Well will be purped until there is no trace of inhibitors or HCL; discharge water will be collected into a bolding track, storing mek, discharge water will be beld in lodding tracks until plt and TDS buffer and stabilize, then discharge water will be released to ground surface.  o Post water quality sampling data will be released to ground surface.  o Post water quality sampling data will be collected from specific community monitoring wells after to acidization aquifer testing.  The real will be pumped for two other wells.  3. Aquifer Test begins. 3 wells will be producing water during a course of 8 to 10 weeks.  3. Aquifer Test begins. 3 wells will be producing water thing a course of 8 to 10 weeks.  o Process will be allowed to recover.  The substitute of pumped one at time. Each well will be pumped for 5 days at 500 gpus, then the well will be allowed to recover.  o After recovery, they will move on to pumping the next well.  o Total volume pumped will be approximately 10 million gallons  o Water that is produced during the aquifer test will flow through natural surface water flow paths to natural stock ponds or tributaries. |
| Industrial Asphalt               | KBE, VE, SD   | 9102/05/6 | Test Well Permit - General Permit             | On 6/28/16 Industrial Asphalt submitted a minor animendment application requesting a production increase of their current 2,000,000 gpy permit to a 4,000,000 gpy. Their increase request is to explace the volume of water that they currently hand in from off site. The permit is currently heing reviewed by stuff. After TCEQs nastile compliance investigation TCEQ issued a formal exit interview form outlining the findings of the TCEQ haspector on August 29, 2016. No violations were alleged as a result of the inspection. TCEQ expuested enjois of several documents were requested - SWPs, a copy of the "drainage area site map", and copies of routine facility inspection records. As of today, no additional comments or requests have been received from the TCEQ pertaining to the aforementioned inspection. We have not received a copy of the TCEQ exit letter.  |
| Gragg Tract L.P                  | KBE, VE, SD   | 9/30/2016 | Well Drilling Authorization                   | On 6/27/16 Gragg Tract LP (Walters Southwest) submitted well drilling authorization to drill a Lower Trinity for the purpose of PWS and frrigation. The test well will be located on the the Gragg Tract off of Old Bliss Spillar in Manchaca near the SH 45 SW right of way. The applicant revised their application by withdrawing their Test Well Permit Application, and submitting a brilling Authorization. They decided to move forward with drilling a completed well rather than a test well of temporary completion.  |
| General Manager Approved Permits | KBE, VE, SD   | 9/30/2016 | Individual Permits < 2,000,000 gal'yr         | No new update,  |
| Drought Statue - No-Drought      | KBE, VE, SD   | 9102016   | Drought Compliance Monitoring and Enforcement | No new update. No-drought was declared on January 29, 2015. Staff sent out consil and letter to all permittees notifying them of no-drought status.   |
| EDUCATION & OUTREACH             | Robin Gary    |           |   |   |
| Bowle High School Science Team   | RG            | 9/30/2016 | Teacher resources discussion                  | In an effort to poll teachers about needs, additional resources, and interest in groundwater science. Robin met with the Aquaite Science, Environmental Science AP, and biology teachers at Bawie. They were very interested in unline videos, activity kits, groundwater monitoring/sampling, and suggested a contacts list of collaborating educators and their expertise. Their input has been incorporated in the Teacher Resources page under development on the website. Currently that page is accessible through the Publications—Articles section. Later it will be linked from the Home page.   |

| Texas Advanced Computing Center               | RG             | 9/30/2016 | Planning, collaboration  | Robin met with outreach and groundwater science research staff the UT Texas Advanced Computing Center (TACC). Discussions focused on open-source access an improved web interface for monitor well data, assistance in developing an open-source data analysis tool for groundwater data, curriculum assistance, and gaming options to left increase online access to things like macro invertebrate samptling and/or caving. |
| Barton Springs University                     | RG, JC, BH, JD | 9102086   | Edu Event  | The Save Our Springs Alliance husted the second annual Barton Springs Univeristy on Wednesday, Sept. 26. Brian Hunt and John gave talks. Robin and Justin taught three successive water quality labs where students measured pil and conductivity of 5 water samples and companed the results to a Barton Springs water sample. Approximately 750 high school students attended the BSU.                                      |
| Enews Blast                                   | RG             | 9/30/2016 | September eNews  | The September eNews was released on September 6, 2016 to commemorate Protect our Groundwater Day. Planned included wells and storntflow/spills, purpose of aquifer tests, and Westbay installation overview.  |
| Internet Traffic Report                       | KG             | 9:30/2016 | Page views and visits to the District Website                  | The shift to the new District website is complete. All clements are functional, however minor improvements will continue to be made over the next month or so. Analytics are not available at this time due to the domain shift. The District Facebook page now has 508 'Likes' and responses to posts have been very positive.   |
| AQUIPER SCIENCE                               | Brian Smith    |           |  |   |
| Dye Tracing                                   | BS, BH         | 9/29/2016 | Dye tracing  | Discussions are underway with the EAA and CoA about potential dye tracings in the upconsing months in the Blanco and Onion watersheds. The City has injected at various locations along \$1145.   |
| Central Hays County Groundwater<br>Evaluation | BH, BS, JC     | 9/29/2016 | Well and hydrogeology characterization                         | District staff have established a manitoring network of nearby wells to collect data during the EP aquifer test. Hays and Travis Counties have approved funds to support those efforts, including the installation of multiport monitor wells.  |
| Antioch Cave                                  | BS, BH, JC     | 9/29/2016 | Onion Creek Recharge Enhancement Project                       | The Antioch system is open to allow recharge, and there is flow in Onion Creek due to heavy rains in August.  |
| Water-Quality Studies                         | BS, BH, JC     | 9/29/2016 | Sampling and analysis of groundwater and surface water         | District staff are continuing work with a geochemist to evaluate the years of data we have collected on behalf of the TWDB.   |
| Saline Zone Studies                           | BS, BH         | 9797010   | Installation of multiport monitor well                         | Drilling began August 3, 2016 at the TDS site. Installation of the multiport was finished on August 24. Testing and sampling of the well will begin by about Oct. 5. It will be about 2 months before the initial testing and sampling is completed.  |
| Drought and Water-Level Monitoring            | BII, RS, JC    | 9/20/2016 | Drought status, monitor wells, and synoptic water level events | Following a brief period of receding water levels in July and August, the water level in Lavelady well continues to rise because of over 12 inches of rain from Aug. 13 through 21 and an additional 2 to 4 inches between Sept 24 and 26. As of Sept. 29, the water level in the Lovelady well was at \$45.6 ft above instand Barton Springs was flowing at 112 cfs.   |
| Information Transfer                          | BS, BR, JC     | 9107/67/6 | Presentations, conferences, reports, and publications          | Brian Smith attended a conference in San Juan in late January on contamination in knrst and public health and is working on a paper to be published in a journal. Brian Hunt presented the results of the Onion Creek study in Corpus Christi, which was published for the GCAGS conference (Sept 2016). Staff are also working on finalizing some other teclmical reports and documents.                                     |
| Aquifer Testing                               | BS, BH, JC     | 9/29/2016 | Planning, participation, and review of aquifer tests           | Staff continue working with EP regarding their planned aquifer test scheduled for October or November.  |
| AD-HOC TEAMS                                  | A CONTRACTOR   |           |  |   |
| Technical Team                                | BAS            | 9/29/2016 | Current areas of discussion                                    | Topics of discussion at the technical team meeting in September were the RFP grant, agreements with Hay and Travis Counties, EP aquifer test, and Dripping Springs issues.  |
| Planuing Team                                 | GF.            | 8/31/2016 | Strategic and factical planning and discussion topics          | New Business: Legislative Update; Dripping Springs TPDES permit; Aunual Report planning, Employee Policy Manual edits.  |

|---|---------------|----------|--|--|---|
| Benefits Team                               | VESDTR        | 910211-6 | Research alernative health plan benefits packages and provide recommendation.                  | The team provided staff with an employee benefits survey to assess employees' satisfaction will the Health Insurance Plan (United Healthcare All Savers). In Nov 2015 the Disipter made the switch to this new plan to save costs while maintaining the same level of coverage that las been previously provided. The employees provided feedback that while there is an overall general satisfication with most aspects of the plan, there are paricular areas that have changed that increases costs to the employee. The Disinct also received a renewal notice informing that the insurance rates will go up 10%. The ad hoc team will be meeting with the Disinct's benefits coordinator to review some insurance plan comparisons. The feam will produce a memoradum to summarize the feedback of the employee survey plan options.  |   |
| Database Team                               | KG/VJ:        | 91/2016  | Identify District database needs and research vendors and options for database improvements    | Current Database Scheme: There are inefficiencies with the 10 yr old system including limited functionality, unreliable design structure that requires continuous maintenance and improvements, and inclficient or redundant workflows in the database system that increase staff time and effort.  Objectives include: This ad loc team is working towards providing a recontinuous analysis of management that for improving the efficiency of District operations through enhanced data management wols. Recommendation will address creating an integrated hydrologic database, streamlining the permitting and annual process, providing real time data access and entry, improving data analysis for management plan and PCP related reports, providing a robust OAC process for continuous monitoring data, and creating online accessibility of monitoring data for public education.  Team Activities: The ad hoc team and staff are currently working through the exercise of identifying database needs and defining long term objectives for moving forward with the development of an integrated database management scheme. Currently, all of the core teams (development of an integrated database management acteme. Currently, all of the core teams (development of an integrated database management acteme. Currently, all of the core teams (development of an integrated database management acteme. Currently, all of the core teams (divid database investment and crepted an in-depth overview of their database investment and capabilities of their new data management tools.  Next Steps: Define the District's overall functionality and data management needs, research tools that other GCDs use, schedule data management demonstrations with GCDs and consultants, define a hudgeting scope.   |   |

#### **Purpose**

- Strategic planning
- Solicit board direction
- · Identify evolving year-to-year priorities
- Integrates with MP commitments
- Fits with team structure
- · Guides use of limited resources/staff time

#### FY 17 - Overarching Drivers

- Continue HB 3405 implementation
- Plan for 2018 MP revision
- Plan for HCP Implementation
- 30th Anniversary
- HR/operations policy updates
- Improved efficiency

#### **GM Team Overview**

FY 16 Goal: Advocate for best roadway runoff controls and wastewater management practices

#### FY 17 Outlook:

- · Continued recharge protection:
  - SH 45/Consent Decree compliance
  - Dripping Springs TPDES permit application
  - TCEQ rule petition
- GM Objectives:
  - PGMA GCD analysis/support
  - 85th Legislative Session
  - Overarching Drivers

#### Admin. Team Overview

FY 16 Goal: Preparations for 2016 Elections

#### FY 17 Outlook:

- · Admin. operational improvements
- · HR/Operational policy updates
- Transparency Stars
- Online/Technology options

#### **Edu./Outreach Team Overview**

FY 16 Goal: Increase awareness and refine communication strategies

#### FY 17 Outlook:

- Plan for District 30 year anniversary celebration and commemoration
- Develop resources to address/highlight topics of interest, commonly asked questions, and District capabilities
- Facilitate access to data

#### Reg. Comp. Team Overview

FY 16 Goal: Initiate rulemaking to implement H.B. 3405 and refine permitting framework.

#### FY 17 Outlook:

- Continue with measures to further refine well construction standards in the Shared Territory
- Rulemaking Establish framework for permitting ASR
- Policy development related to mitigation, correlative rights, and well spacing.
- Prepare for Management Plan revisions and plan for implementation of HCP commitments

|                                       |             |

FY 16 Goal: Conduct scientific studies and develop the regulatory framework that support the development and the use of alternative water supplies through methods such as ASR) of groundwater and/or floodwaters and desalination

#### FY 17 Outlook:

- Hays and Travis County multiport well installation
- EP aquifer test and evaluation
- HCP tasks- Antioch operation, DO studies at Barton Springs
- · Sampling and testing of saline Edwards multiport well

#### **Next Steps**

- · No action tonight
- Staff will compile Board comments/inputs
- Staff will formulate draft FY17 goals and GM objectives incorporating Board inputs
- Draft goals and GM objectives to be considered at 10/6/16 Board meeting

# **Board Discussions and Possible Actions**

b. Discussion and possible action related to setting the FY 2017 performance objectives for the General Manager.

#### **Board Discussions and Possible Actions**

c. Discussion and possible action related to the Travis County portion of the Hill Country Priority Groundwater Management Area (PGMA).

#### **MEMORANDUM**

Date: September 29, 2016

To: Board of Directors

From: John T. Dupnik, P.G., General Manager and

Re: Agenda Item 4.c. – Hill Country PGMA

The following documents are provided as backup information for this item. Documents include:

- 1. Travis County backup packet for Travis County Commissioners' May 12, 2016 Work Session on GCD creation in the PGMA.
- 2. Draft "Guiding Principles" for GCD creation recommended by Travis County staff
- 3. Draft Southwestern Travis County GCD bill by Rep. Workman.
- 4. GCD Revenue Comparison Fact Sheet
- 5. GCD Revenue Scenario Analysis

# **Travis County Commissioners Court Agenda Request**

Meeting Date: May 12, 2016

Prepared By: Thomas Weber, Environmental Program Manager Phone #: (512)

854-4629

Division Director/Manager: Jon White, Environmental Quality Division Director

**Department Head:** Steven M. Manilla, P.E., County Executive-TNR **Sponsoring Court Member:** Commissioner Daugherty, Precinct Three

**AGENDA LANGUAGE**: Discuss and receive update from staff and provide direction to staff on possible efforts to establish a Trinity Aquifer Groundwater Conservation District.

#### **BACKGROUND/SUMMARY OF REQUEST:**

The Trinity Aquifer in southwest Travis County is designated by the State of Texas as a Priority Groundwater Management Area (PGMA) meaning the area is likely to experience critical groundwater problems, such as shortages and contamination. Historical water levels are declining and groundwater demand is expected to exceed availability. In times of drought, residential, public and agricultural wells could run dry. An area map showing the PGMA is in Exhibit 1.

Texas law under the "rule of capture" limits what the state or local governments can do to better manage our limited water resource. The Texas Water Code sets out processes for local control and responsibility over groundwater management by Groundwater Conservation Districts (GCDs) as the preferred alternative to the rule of capture. These GCDs must be created and voters in an affected area elect GCD Directors. Voters confirm a property tax rate for GCD revenue, if applicable. Several unsuccessful initiatives have been undertaken to create a GCD in southwest Travis County. A time line of previous initiatives, TCEQ actions, and legislative proposals is included at Exhibit 2. Today, TNR is seeking direction from the Commissioners Court on how it would like to proceed on public efforts to establish a GCD in southwest Travis County.

We ask that the Commissioners Court review and consider the substantial benefits that result from the operation of a functioning, effective GCD. The benefits include groundwater resource conservation and protection, collection and use of data and trend analysis, improved management of groundwater withdrawals, well spacing, and participation in regional water planning. Exhibit 3 summarizes and describes these benefits.

May 12, 2016 - Work Session Page 2

The benefits do not come until or unless there is strong and wide public support for a GCD and the necessary revenue to fund a GCD. The Commissioners Court may need to gage or evaluate public support from the leaders of affected municipalities, water supply utilities and ultimately the voters in southwest Travis County. Voters choose an elected board of directors and must confirm any GCD's ad valorem tax assessment. Exhibit 4 identifies the various ways a GCD can be created and the four principal alternatives for revenue.

#### **STAFF RECOMMENDATIONS:**

TNR staff seek direction on next steps towards addressing the lack of a GCD in southwest Travis County. We refer the Commissioners Court to some possible alternatives with their pros and cons included in Exhibit 5. Should Travis County take on this issue? Should we work towards a southwest Travis County GCD or work towards annexation with an adjacent GCD? What financial support is the Commissioners Court willing to provide towards a GCD? What administrative or non-legislative GCD creation efforts should be undertaken? Should we support a bill by State Representative Workman during the upcoming 2017 session of the Texas Legislature? (See Exhibit 6, pending receipt.)

#### **ISSUES AND OPPORTUNITIES:**

Critical groundwater shortages in the Trinity Aquifer are what we face in southwest Travis County. The Texas Water Development Board (TWDB) has been recording changes in Trinity Aquifer levels since 1987 from a well near Oak Hill. Water levels fell over 88 feet through 2014. Travis County's population growth is expected to rise 76% by 2050. Water User Groups located in southwest Travis County project utility population through 2070 to grow by 39%. From 2001 to 2014, state data tell us that 1631 new wells into the Trinity were drilled in southwest Travis County, with a growing reliance on groundwater for turf irrigation during times when surface water supplies from the Highland Lakes are curtailed due to drought. Exhibit 7 also shows well drilling trends from 2004 - March 2016, based upon reports officially filed with the Texas Water Development Board.

#### FISCAL IMPACT AND SOURCE OF FUNDING:

Please refer to Exhibit 4. It describes potential sources of funding if or when a GCD is created and confirmed by the voting population within the PGMA. At this time, no fiscal impact is clear.

0801 - NREQ - Priority Groundwater Management Area

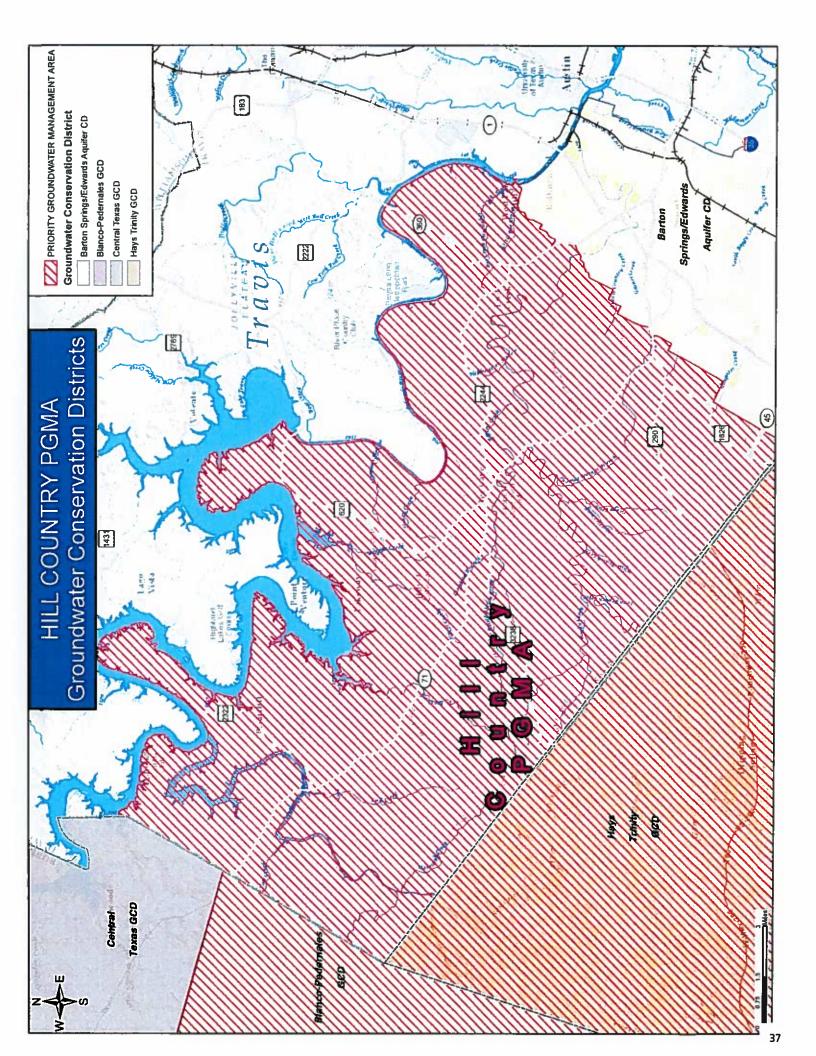

Exhibit 2
Time Line Relating to Creation of a Groundwater Conservation District in Southwest Travis County

| Date           | Initiative or Action  |
|----------------|---|
| Feb. 26, 1990  | Texas Water Commission (TWC) implements 1989 state legislation and issues a   |
|                | Critical Area Report recommending all or parts of 8 counties be designated as |
|                | the Hill Country Priority Groundwater Management Area (PGMA), because the     |
|                | area is likely to experience critical groundwater shortages and contamination |
| July 1990      | Commissioners of TWC designate Hill Country PGMA, which begins process of     |
|                | using state resources and outreach to seek creation of Groundwater            |
|                | Conservation Districts (GCDs) in the Texas Hill Country                       |
| July 2000      | The Texas Commission on Environmental Quality (TCEQ) presented                |
| •              | information to CAPCOG on GCDs   |
| May 7, 2001    | Travis County Commissioners Court discussed GCD creation at a work session    |
| July 26, 2001  | Travis County Commissioners Court held a public meeting in Manor to gage      |
| ,              | interest  |
| June 3, 2002   | Travis County Commissioners Court noted that it did not anticipate further    |
| ·              | action on the issue of GCD creation due to insufficient public interest       |
| May 2006       | Hill Country Alliance & Travis County facilitated a GCD education meeting in  |
| •              | Bee Cave  |
| March 2007     | Sen. Kirk Watson & former Rep. Valinda Bolton facilitated a meeting with      |
|                | county and municipal representatives to discuss GCD creation options          |
| Late 2008      | Barton Springs/Edwards Aquifer Conservation District (BSEACD) hosted town     |
|                | hall meetings to get public feedback on proposal to annex southwest Travis    |
|                | County into their GCD   |
| March 2009     | Watson & Bolton file legislation that proposes to annex southwest Travis      |
|                | County into BSEACD, upon confirmation of the voters; Travis County            |
|                | Commissioners Court advocates for the legislation; it does not pass           |
| Sept. 29, 2009 | TCEQ issues & requests comments on a GCD Recommendation Report that           |
| ·              | identifies as a primary alternative to add southwest Travis County into the   |
|                | BSEACD  |
| Jan. 5, 2010   | Travis County Commissioners Court passes a Resolution requesting TCEQ to      |
|                | support a GCD creation alternative that would establish a western Comal,      |
|                | western Hays, and southwestern Travis County GCD; Comal and Hays              |
|                | Commissioners Courts also pass similar resolutions                            |
| Aug. 12, 2010  | Based on the resolutions, TCEQ's executive director petitions the TCEQ        |
|                | Commission to create the 3-county GCD (as a primary alternative), a matter    |
|                | referred to State Office of Administrative Hearings (SOAH)                    |
| Oct. 28, 2010  | SOAH convenes a preliminary hearing naming parties (including Travis County)  |
| April 6, 2011  | SOAH convenes an additional preliminary hearing at which time Rep. Paul       |
|                | Workman requests the hearing be abated pending possible legislative action;   |
|                | SOAH grants abatement   |
|                |   |

| Mar. 23, 2011 | Rep. Paul Workman files legislation in the 82 <sup>nd</sup> legislative session to exclude southwest Travis County from the PGMA; it does not pass   |
|---------------|--|
| Dec. 6, 2011  | SOAH again grants abatement  |
| Aug. 7, 2012  | SOAH again grants abatement and requires TCEQ executive director (ED) to file a new status report no later than July 1, 2013 and requests the ED motion to either extend abatement, withdraw the 2010 petition, or set a hearing on the merits             |
| Mar. 6, 2013  | Rep. Paul Workman files legislation (HB 2640) in 83 <sup>rd</sup> legislative session, cosponsored by Sen. Troy Fraser, to create a Western Travis County GCD for the PGMA area except the area within municipalities and municipal ETJs; it does not pass |
| June 27, 2013 | TCEQ executive director files status report and motions that SOAH hearing be set   |
| Jan, 7, 2014  | TCEQ executive director files motion to withdraw the 2010 petition, cancel the SOAH hearing, & remand the petition to the TCEQ staff; SOAH grants motion on Jan. 27, 2014  |
| Mar. 13, 2015 | Rep. Paul Workman files legislation (HB 4038) in 84 <sup>th</sup> legislative session to create a Western Travis County GCD for the PGMA area except the area within municipalities and municipal ETJs; it does not pass                                   |
| June 17, 2015 | Legislation signed by governor creating the Comal Trinity GCD (HB 2407), which leaves the Travis County area of the Hill Country PGMA as the final area lacking a GCD  |

#### Exhibit 4

# Groundwater Conservation District Creation & Revenue Sources

Broadly, GCD creation takes the form of either administrative or legislative processes. The administrative processes are ones that TCEQ and existing GCDs can implement without legislation.

Under legislative processes, often the authority of a GCD becomes a blend of either "general law" authority specified in Texas Water Code (TWC), Chapter 36 along with special authority or prohibitions specified in the legislation.

#### TCEQ recommendation of a GCD in a PGMA (TWC Sec. 35.008)

- Evidentiary hearing on merits of creating a new district or annexing PGMA to an existing
   GCD or a combination of those actions
- TCEQ Order recommending GCD creation
- If annexation is specified in the TCEQ Order (TWC Sec. 35.013):
  - Vote by receiving GCD Board
  - Election in PGMA
  - Reasonable representation compatible with existing district
- If a new GCD is specified in the TCEQ Order (TWC Sec. 36.0151):
  - Notification to each County
  - County Commissioners select temporary directors
  - Election of permanent directors and setting tax rate (if revenue is not fee based)

#### Petitions adding territory to an existing GCD (Texas Water Code, Chapter 36, Subchapter J).

- Three types:
  - o one landowner of a tract (Sec. 36.321)
  - petition by 50 landowners or a majority of landowners within a territory requesting inclusion (Sec. 36.325(b)(1) – (2))
  - Commissioners Court may petition to add a PGMA area or an entire county into an existing GCD (Sec. 36.325(b)(3))
- Hearing, decision, and resolution by the receiving GCD Board
- Election to ratify annexation in territory to be added (ballot indicates property tax rate, if revenue not fee based)

#### Texas Legislature

- Legislation creating a GCD can specify the GCD's power & authority by cross-references to all or some of Tex. Water Code Chapter 36
- Most recent example is the Comal Trinity GCD; authority for annual well use fee, including exempt wells
- Annexation of territory into an existing GCD can occur through legislation
- Codify revenue methods (well production fees, subsidies for GCD from county, city, water districts, etc.)
- Often, legislation needed to clean up discrepancies in districts created by petition or TCEQ Order

#### Revenue

| Water Use (Well Production) Fees  | Maintenance Fee   |
|---|---|
| <ul> <li>Assessed annually on permitted wells</li> <li>Based on authorized usage specified in permit</li> <li>Fees can be established by legislation</li> <li>Otherwise, fees are from Chapter 36:         <ul> <li>Agricultural water use well – up to \$1.00/ac-ft</li> <li>All other water uses – up to \$10.00/ac-ft</li> </ul> </li> </ul> | <ul> <li>Ad valorem property tax assessment</li> <li>Not to exceed \$0.50/\$100 assessed value</li> <li>In practice, rates are nowhere near this cap</li> <li>Election to approve property tax rate</li> </ul>                          |
| Permit Fees   | Locally Financed  |

# Exhibit 5 Alternatives for Addressing Groundwater Management In the Southwest Travis County

|   | CREATION & ANNEXATION ALTERNATIVES   |  |  |  |
|---|--|--|--|--|
|   | Alternative  | Pros   | Cons   |  |
| 1 | No Action  | -Allow market & supply/demand to prevail -Use resource while it is there; then turn to other supplies -No direct costs to property tax payers -No changes necessary to Hays Trinity GCD  | -Interruption of private supply possible -Environmental costs (spring flow, based flow to creeks) -Indirect costs for water utility capital improvements possible (water transmission pipelines, well deepening, etc.)   |  |
| 2 | Develop a stakeholder<br>group to better gage<br>current support for a<br>GCD                    | -Seek consensus, esp. from water utilities and cities in SW Travis CoLook at solutions for GCD that also includes Hays CoObjective forum to weigh issues   | -Efforts in past have failed<br>-Strong concerns regarding rising<br>property taxes<br>-Strong anti-government sentiments<br>are common  |  |
| 3 | Establish a Single-County<br>GCD in Southwest Travis<br>County                                   | -Simplifies coordination and collaboration to intra-county methods -Addresses the PGMA and need for resource conservation -An effective, appropriately funded GCD is <i>de minimus</i> with <i>ad valorem</i> maintenance fee (\$3.70 or less annually for \$250,000 property value) | -Efforts in past have failedIf such a GCD excludes the municipalities (and their ETJs too), the management of the Trinity Aquifer is not very effective -Voters in SW Travis County may not confirm such a district, if it includes property tax -May require local government subsidies   |  |
| 4 | Annexation strategies to add the southwest Travis County PGMA into the adjacent Hays-Trinity GCD | HTGCD already has authority over Trinity Aquifer -Addresses Trinity Aquifer more holistically (aquifer does not stop at the county line) -Could use an annexation process to address funding needs in Hays CoEconomies of scale result in lower cost rates (staff, equipment, etc.)  | -HTGCD currently lacks sufficient revenue to effectively manage the resource in Hays Co -This is not a viable solution unless HTGCD revenue limitations are removed - Need to address boundaries for existing directors -Requires support in Hays County by HTGCD -Voters in SW Travis County and western Hays may not confirm such a district if it includes property tax |  |

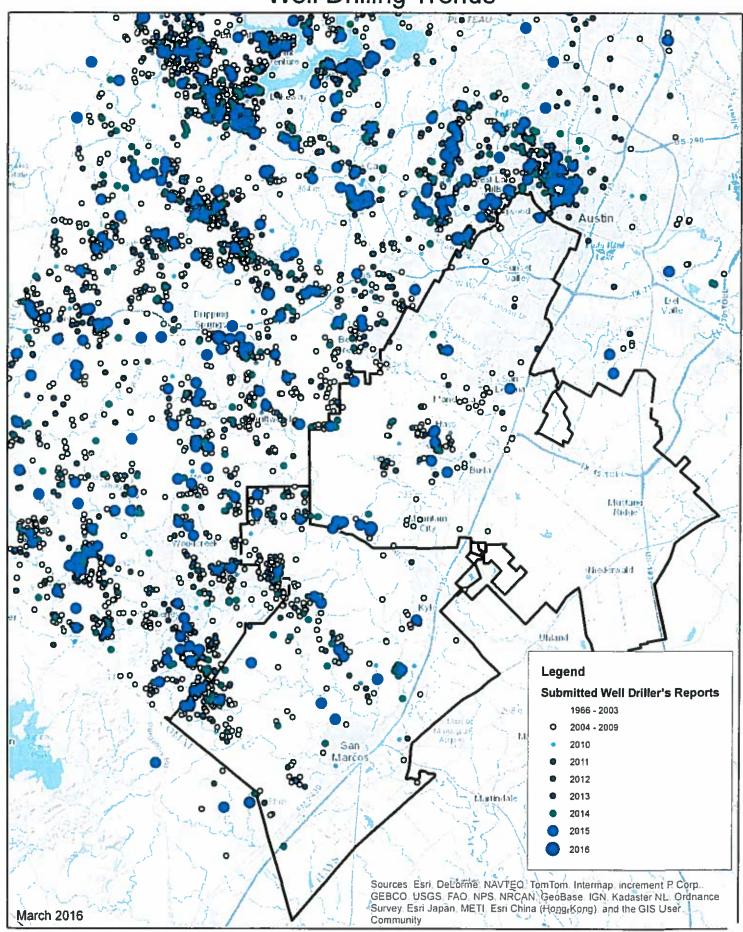

|   | Alternative   | Pros  | Cons  |
|---|---|---|---|
| 5 | Annexation strategies to add the southwest Travis County PGMA into the adjacent Barton Springs Edwards Aquifer Conservation District (BSEACD) | -BSEACD already has authority over Trinity Aquifer (in addition to Edwards) -Functioning district that effectively manages the resource -Potential to focus management in manner that considers ground and surface water interactions between Trinity & Edwards -Economies of scale result in lower cost rates (staff, equipment, etc.) | -BSEACD funding is not from ad valorem taxes so insufficient funds available -BSEACD recently expanded and is taking on significant workload; doing more at this time may be too much of a challenge -Need to address boundaries for existing directors -Some view BSEACD as too Austincentric -Requires support of BSEACD Board of Directors |

|   |  | REVENUE ALTERNATIVES   |   |
|---|--|--|---|
| 1 | Funding from Water Use<br>(well production) and<br>Permit Fees           | -Avoids election & confirmation by voters on tax rate -The biggest users of groundwater pay -Exempt well users do not pay fees   | -In Hays and Travis counties, too few wells to permit -Insufficient funding would cripple effectiveness of such a GCD; this is the experience of HTGCD -TCEQ estimated that this option would raise \$2847 annually                                     |
| 2 | Specific legislation establishes a GCD's fee authority                   | -Avoids election on tax rate -Could set production fees modestly higher than those in Chapter 36 -The biggest users of groundwater pay -Production fees on exempt well users could be authorized   | -Option not likely to be viable as a sole revenue source -Strong political support necessary to turn legislation into law -Efforts in past have failed -Strong anti-government sentiments are common  |
| 3 | Local Appropriation to a<br>GCD from county or<br>municipal general fund | -Avoids election on tax rate -A small annual cost of \$250,000, that would likely increase slowly with inflation -Broadens cost to both county and municipal governments -In kind contributions of office space or other equipment/services could defray costs | -A county or municipal government could stop or reduce funding at a future time -Shifts burden from the SW Travis County residents to taxpayers in Austin and remainder of county   |
| 4 | Funding by a Maintenance Fee (ad valorem taxes)                          | -If district covered all of PGMA in SW Travis County, cost is de minimus (\$3.70 or less annually for \$250,000 property value)  | -If a GCD excludes the municipalities (and perhaps their ETJs too), the rate would be higher -Voters in SW Travis County may not confirm such a district -Strong concerns regarding rising property taxes -Strong anti-government sentiments are common |

Assumptions: Based on TCEQ analysis of 2008 property valuations, funding for a \$250,000 GCD budget, tax rate of \$0.00149/\$100 valuation; property valuations are now higher so tax rate would be lower

Assumptions: TCEQ reviewed 2008 water use reports and determined that production from non-agricultural wells would generate \$2550 (\$10/acre-feet) and \$297 (\$1/acre-feet) from agricultural wells in southwest Travis County.

# Well Drilling Trends

TNR recommends that the Travis County Commissioners Court adopt the following guiding principles as it considers support of either administrative actions or legislation proposing to create a GCD in the Hill Country PGMA, particularly in southwest Travis County:

- 1. Creation of a GCD rather than leaving groundwater management unaddressed within the PGMA
- 2. A GCD with adequate and independent funding from the users of groundwater within the GCD
- 3. A GCD with effective powers, similar to the powers granted by State law in Chapter 36, Texas Water Code
- 4. Powers that could be considered as prohibited may include the power to assess ad valorem property taxes and the power of eminent domain
- 5. Powers that should not be prohibited would include authority to enter private property of an owner of an exempt groundwater well, the authority to annually assess a well production fee, based upon authorized pumpage from a non-exempt well, and other appropriate authority to establish modest fees on groundwater use as set out in Chapter 36
- 6. A geographic extent that, at a minimum, includes all territory within the PGMA in southwest Travis County, including within municipal boundaries
- 7. Consideration of options that may include a geographic extent for a GCD that combines southwest Travis County's PGMA area with other Trinity Aquifer GCDs adjacent to Travis County, if support can be gained for such an option and if a combined area had effective groundwater management capability

These guiding principles provide the powers common to other effectively managed GCDs. These guiding principles are ones promoted by the Texas Commission on Environmental Quality to implement effective groundwater management via the State's preferred method of locally-based GCDs.

### A BILL TO BE ENTITLED

### AN ACT

relating to the creation of the Southwestern Travis County Groundwater Conservation District; providing authority to issue bonds; providing authority to impose fees and surcharges.

BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF TEXAS:

SECTION 1. Subtitle H, Title 6, Special District Local Laws Code, is amended by adding Chapter 8871 to read as follows:

### CHAPTER 8871. SOUTHWESTERN TRAVIS COUNTY GROUNDWATER

### CONSERVATION DISTRICT

### SUBCHAPTER A. GENERAL PROVISIONS

### Sec. 8871.001. DEFINITIONS. In this chapter:

- (1) "Board" means the district's board of directors.
- (2) "Director" means a board member.
- (3) "District" means the Southwestern Travis County
  Groundwater Conservation District.

Sec. 8871.002. NATURE OF DISTRICT. The district is a groundwater conservation district in Travis County created under and essential to accomplish the purposes of Section 59, Article XVI, Texas Constitution.

Sec. 8871.003. FINDINGS OF PUBLIC USE AND BENEFIT. (a)

The district is created to serve a public use and benefit.

(b) All land and other property included in the district will benefit from the works and projects accomplished by the district under the powers conferred by Section 59, Article XVI, Texas Constitution.

Sec. 8871.004. INITIAL DISTRICT TERRITORY. (a) The district is initially composed of the territory described by Section 2 of the Act creating this chapter.

- (b) The boundaries and field notes contained in Section 2 of the Act creating this chapter form a closure. A mistake made in the field notes or in copying the field notes in the legislative process does not affect the district's:
  - (1) organization, existence, or validity;
- (2) right to issue any type of bond for the purposes for which the district is created or to pay the principal of and interest on a bond; or
  - (3) legality or operation.

Sec. 8871.005. CONFIRMATION ELECTION NOT REQUIRED. An election to confirm the creation of the district is not required.

SUBCHAPTER B. TEMPORARY AND INITIAL DIRECTORS

Sec. 8871.021. APPOINTMENT OF TEMPORARY DIRECTORS;

VACANCIES; TERMS. (a) Seven persons who reside in the district

shall be appointed as temporary directors not later than the 90th day after the effective date of the Act creating this chapter as follows:

- (1) the county judge of Travis County shall appoint one temporary director;
- (2) the county commissioner for the county commissioners precinct in which the district is located shall appoint two temporary directors;
- (3) the state representative who represents the house district in which the district is principally located shall appoint two temporary directors; and
- (4) the state senator who represents the senate district in which the district is principally located shall appoint two temporary directors.
- (b) If a temporary director fails to qualify for office or a vacancy occurs on the temporary board, the remaining temporary directors shall appoint a person to fill the vacancy. If at any time there are fewer than four temporary directors, the state representative under Subsection (a)(3) shall appoint the necessary number of persons to fill all vacancies on the board.
- (c) Temporary directors serve until the date initial directors are elected at an election held under Section 8871.024.

- Sec. 8871.022. ORGANIZATIONAL MEETING. (a) Not later than the 45th day after the date on which the seventh temporary director is appointed under Section 8871.021, the temporary directors shall hold the organizational meeting of the district.
- (b) The temporary directors shall select from among themselves a president, a vice president, and a secretary.
- Sec. 8871.023. AUTHORITY OF TEMPORARY DIRECTORS. (a) Except as provided by Subsections (c) and (d) or otherwise by this subchapter, the temporary directors of the district have the same permitting and general management powers as those provided for initial and permanent directors under this chapter and Chapter 36, Water Code.
- (b) The temporary directors or their designees have the authority to enter any public or private property located in the district to inspect a nonexempt water well under Section 8871.102, as provided by Section 36.123, Water Code.
- (c) Except as provided by Section 8871.024, the temporary directors do not have the authority granted by the following provisions of Chapter 36, Water Code:
  - (1) Sections 36.017, 36.019, 36.020, and 36.059;
- (2) Sections 36.105, 36.1071, 36.1072, 36.1073, and 36.108;
  - (3) Sections 36.171-36.181;

- (4) Sections 36.201-36.204; and
- (5) Subchapters J and K.
- (d) The temporary directors may regulate the transfer of groundwater out of the district as provided by Section 36.122, Water Code, but may not prohibit the transfer of groundwater out of the district.
- Sec. 8871.024. INITIAL DIRECTORS' ELECTION. (a) The temporary directors shall order an election in the district to be held not later than the uniform election date in November 2019 to elect the initial directors.
- (b) At the initial directors\* election, the temporary board shall have placed on the ballot the names of the candidates who are eligible under Section 8871.051 for each of the seven positions on the board.
- (c) Section 41.001(a), Election Code, applies to an election held under this section.
- (d) Except as provided by this section, the initial directors' election must be conducted as provided by the Election Code and Sections 36.017(b), (c), and (e), Water Code.
- Sec. 8871.025. INITIAL DIRECTORS. (a) Promptly after the election has been held under Section 8871.024 and the votes have been canvassed, the temporary directors shall:
  - (1) declare for each board position the person who

receives the most votes for that position to be elected as the initial director for that position; and

- (2) include the results of the initial directors' election in the district's election report to the Texas Commission on Environmental Quality.
- (b) The initial directors shall draw lots to determine which three initial directors serve two-year terms and which four initial directors serve four-year terms.

### SUBCHAPTER C. BOARD OF DIRECTORS

- Sec. 8871.051. GOVERNING BODY; TERMS. (a) The district is governed by a board of seven directors.
- (b) Directors elected after the election held under Section 8871.024 serve four-year terms.
  - (c) The directors are elected as follows:
- (1) one director must reside in the corporate limits of the City of Bee Cave and be elected by voters residing in the City of Bee Cave;
- (2) one director must reside in the corporate limits of the City of Lakeway or Village of The Hills and be elected by voters residing in the City of Lakeway and Village of The Hills;
- of the City of West Lake Hills and be elected by voters residing in the City of West Lake Hills; and

(4) four directors shall be elected at-large and must reside inside the district and outside the corporate limits of the City of Bee Cave, City of Lakeway, Village of The Hills, and City of West Lake Hills.

### SUBCHAPTER D. POWERS AND DUTIES

Sec. 8871.101. GROUNDWATER CONSERVATION DISTRICT POWERS

AND DUTIES. Except as otherwise provided by this chapter, the

district has the powers and duties provided by the general law

of this state, including Chapter 36, Water Code, applicable to

groundwater conservation districts created under Section 59,

Article XVI, Texas Constitution.

Sec. 8871.102. EXEMPT WELLS. (a) Groundwater withdrawals from the following wells may not be regulated, permitted, or metered by the district:

- (1) a well used for domestic use by a single private residential household and incapable of producing more than 25,000 gallons per day; and
- (2) a well used for conventional farming and ranching activities, including intensive operations such as aquaculture, livestock feedlots, or poultry operations.
- (b) The district may not charge or collect a well construction fee for a well described by Subsection (a)(2).
  - (c) A well owner must obtain a permit and pay any required

fees, including a well construction fee, before using any groundwater withdrawn from a well for purposes other than those exempted by this section.

- (d) A well used for dewatering and monitoring in the production of coal or lignite is exempt from permit requirements, regulations, and fees imposed by the district.
- (e) The district may not enter property to inspect an exempt well without the property owner's permission.
- Sec. 8871.103. NO EMINENT DOMAIN POWER. The district may not exercise the power of eminent domain.

### SUBCHAPTER E. FINANCIAL PROVISIONS

- Sec. 8871.151. WELL CONSTRUCTION FEE. The district may charge and collect a new well construction fee not to exceed \$1,000 for a new well.
- Sec. 8871.152. PERMIT RENEWAL APPLICATION FEE. The district may charge and collect a permit renewal application fee not to exceed \$400.
- Sec. 8871.153. SERVICE CONNECTION FEE. (a) This section does not apply to a water utility that has surface water as its sole source of water.
- (b) The district may levy and collect a water utility service connection fee not to exceed \$1,000 for each new water service connection made after September 1, 2017.

Sec. 8871.154. TAXES AND OTHER FEES PROHIBITED. The district may not:

- (1) impose a tax; or
- (2) assess or collect any fees except as authorized by Section 8871.151, 8871.152, or 8871.153.

SECTION 2. The Southwestern Travis County Groundwater Conservation District initially includes all the territory contained in the following area:

(THE TERRITORY OF THE SOUTHWEST TRAVIS COUNTY PORTION OF THE HILL COUNTRY PRIORITY GROUNDWATER MANAGEMENT AREA - AS DESCRIBED BY 2010 TCEQ REPORT; "The southwestern Travis territory is located in the southwestern quarter of Travis County. The southwestern Travis territory is bound to the west by Blanco and Burnet counties, southwest by Hays County, and southeast by the northwestern boundary of the Barton Springs/Edwards Aquifer Conservation District (BS/EACD). The northern boundary of the southwestern Travis territory is the Colorado River (Lake Travis, Lake Austin, and Lady Bird Lake).")

SECTION 3. (a) The legal notice of the intention to introduce this Act, setting forth the general substance of this Act, has been published as provided by law, and the notice and a copy of this Act have been furnished to all persons, agencies, officials, or entities to which they are required to be

furnished under Section 59, Article XVI, Texas Constitution, and Chapter 313, Government Code.

- (b) The governor, one of the required recipients, has submitted the notice and Act to the Texas Commission on Environmental Quality.
- (c) The Texas Commission on Environmental Quality has filed its recommendations relating to this Act with the governor, the lieutenant governor, and the speaker of the house of representatives within the required time.
- (d) All requirements of the constitution and laws of this state and the rules and procedures of the legislature with respect to the notice, introduction, and passage of this Act are fulfilled and accomplished.

SECTION 4. This Act takes effect September 1, 2017.

### **EXHIBIT A - FACT SHEET**

Commissioners Court Voting Session, October 11, 2016

# Groundwater Management in Southwest Travis County Area Characteristics Relevant to Groundwater Use and Management

- Slightly more than 1700 wells are known to exist in the SW Travis County PGMA area, essentially all producing water from one or more of the Trinity Aquifer units.
- 2. Information on a large majority of these wells is incomplete or sparse.
- 3. More than one half of these wells have been installed in the last ten years.
- 4. About 75% of these wells are for domestic-use or livestock use and comprise statutorily exempt wells (exempt from permitting and non-voluntary metering).
- 5. Another 20% are likely used only for *residential* irrigation, and therefore probably also to be considered exempt.
- 6. The remaining 5% (80-90 wells) are used for public water supply, whether in a CCN or not, and for commercial and industrial purposes. A significant non-residential use in the area is golf-course irrigation. These comprise "non-exempt" wells under the default Ch. 36 definitions.
- A particular GCD can also exempt other well classes if allowed to do so in its enabling legislation.
- The relatively few non-exempt wells composing that 5% cohort produce an estimated
   billion gallons (3700 acre-feet of groundwater annually), which would be subject to regulation by a GCD.
- 9. About 25% of the non-exempt use is ascribed to golf course irrigation, which at present is not well characterized in this area and which will vary from course to course, month to month, and even year to year with water management strategies employed, including storm-water and reclaimed water use, drought response, and availability of surface-water supplements.
- 10. The numerous wells in the 95% cohort are all exempt under Chapter 36 and produce an estimated 500 million gallons (1500 acre-feet of groundwater annually), or about 30% of the total groundwater production in the area, which would not be subject to regulation by a GCD.
- 11. Most of the population in this area resides in municipalities or other areas with water utilities that are served by surface water, not groundwater. But, future growth may require more reliance on groundwater as the surface water supplies are becoming fully subscribed.

### Implications for Groundwater Management

- 12. All producing wells, whether exempt or non-exempt, would typically be registered with a GCD and would benefit from management of their common groundwater resource.
- 13. The disparity in the number and production volumes between exempt and non-exempt wells indicates that its management should be based on volume of (potential) production, not on number of wells.
- 14. Production fee revenue could be lower if enabling legislation exempted a larger number of wells that the exemption thresholds in the Chapter 36 default definitions.
- 15. Only the non-exempt wells would be subject to permitting, metering, use reporting, and drought management provisions.
- 16. Production fees on non-exempts would be in lieu of an ad valorem tax based GCD, which is judged to be politically infeasible in this area.
- 17. Given the small number of wells subject to regulation, production fees should be applied on an authorized-use (i.e., as-permitted) basis, as opposed to an actual production basis. An authorized use basis minimizes large swings in the monthly revenue supporting GCD operations arising from variations in demand caused by natural

and intrinsic operational conditions. Fee incentives may be made available for promoting water conservation.

### Implications for Financial Support of a GCD

- 18. The minimum annual operating budget for an effective and sustainable GCD operation in the county's area of interest, and therefore its revenue requirement, is considered to be \$500,000 annually. This amount is a rational average for a functional GCD having the characteristics of this territory.
- 19. The budget and revenue requirements for the prospective GCD in this area reflect operating a relatively small GCD on a stand-alone basis, rather than including the economies of scale that could arise from managing the area as part of a larger entity, e.g., regionally as part of an adjacent GCD.
- 20. The annual revenue may be provided by a combination of dollars from production fees and in-kind support provided by other parties, including office and vehicle expenses required for operation or continuing cash contributions to offset other operational expenses.
- 21. The maximum allowable fee rate and production basis would be specified in the enabling legislation. The fee rates are set each year by the GCD's Board of Directors.
- 22. The following table shows example annual revenue estimates based on various production fee rates, using the estimated non-exempt production:

| Annual Estimated Revenue SW Travis County GCD (PGMA area) | Well Production Fee Rate<br>(per 1,000 gal) |
|---|---|
| \$300,000   | \$0.23                                      |
| \$400,000   | \$0.32                                      |
| \$500,000   | \$0.40                                      |

- 23. Production fees authorized in legislation for GCDs that utilize the Trinity Aquifer vary considerably from the inability to collect production fee revenue (Hay Trinity GCD) to \$0.22/1000 gallons (Upper Trinity GCD west of Ft. Worth).
- 24. For comparison, \$0.54/1000 gallons is the current base raw water rate LCRA assesses for surface water supply.
- 25. It is typical for legislation to specify more limited revenue-collecting powers for an interim board of directors prior to election of permanent directors of a newly created GCD.
- 26. It is desirable to authorize collection of production fees at an initial, temporary fee rate that allows for an effective start-up; authorization of a higher, not-to-exceed fee rate would follow as powers of the elected GCD board of directors.
- 27. The amount of in-kind support necessary for a sustainable GCD would be affected by the enacted fee rates. The smaller the in-kind support, the larger the fee rate needs to be for a sustainable GCD.

| Approach   | Com           | al Trinity App         | roach      |   | Proposed              | d Sustainable          | Approach      |

### **Board Discussions and Possible Actions**

d. Discussion and possible action related to the City of Dripping Springs TPDES permit application to authorize direct discharge of treated wastewater to Onion Creek in the contributing zone of the Barton Springs segment of the Edwards Aquifer.

### **Texas Commission on Environmental Quality**

### **COMBINED**

# NOTICE OF PUBLIC MEETING AND NOTICE OF APPLICATION AND PRELIMINARY DECISION FOR TPDES PERMIT FOR MUNICIPAL WASTEWATER NEW

### **PERMIT NO. WQ0014488003**

**APPLICATION AND PRELIMINARY DECISION.** City of Dripping Springs, P.O. Box 384, Dripping Springs, Texas 78620, has applied to the Texas Commission on Environmental Quality (TCEQ) for new Texas Pollutant Discharge Elimination System (TPDES) Permit No. WQ0014488003, to authorize the discharge of treated domestic wastewater at a daily average flow not to exceed 995,000 gallons per day. TCEQ received this application on October 20, 2015.

The facility will be located at 23127 Ranch-to-Market Road 150, in the City of Dripping Springs, Hays County, Texas 78620. The treated effluent will be discharged to Walnut Springs; thence to Onion Creek in Segment No. 1427 of the Colorado River Basin. The unclassified receiving water use is minimal aquatic life use for Walnut Springs. The designated uses for Segment No. 1427 are high aquatic life use, public water supply, aquifer protection, and primary contact recreation. In accordance with Title 30 Texas Administrative Code Section 307.5 and the TCEQ Procedures to Implement the Texas Surface Water Quality Standards, an antidegradation review of the receiving waters was performed. A Tier 1 antidegradation review has preliminarily determined that existing water quality uses will not be impaired by this permit action. Numerical and narrative criteria to protect existing uses will be maintained. A Tier 2 review has preliminarily determined that no significant degradation of water quality is expected in Onion Creek, which has been identified as having high aquatic life use. Existing uses will be maintained and protected. The preliminary determination can be reexamined and may be modified if new information is received.

The TCEQ Executive Director has completed the technical review of the application and prepared a draft permit. The draft permit, if approved, would establish the conditions under which the facility must operate. The Executive Director has made a preliminary decision that this permit, if issued, meets all statutory and regulatory requirements. The permit application, Executive Director's preliminary decision, and draft permit are available for viewing and copying at Dripping Springs City Hall, Front Desk, 511 Mercer Street, Dripping Springs, Texas. This link to an electronic map of the site or facility's general location is provided as a public courtesy and is not part of the application or notice. For the exact location, refer to the application. <a href="http://www.tceq.texas.gov/assets/public/hb610/index.html?lat=30.154166&lng=-98.08&zoom=13&type=r">http://www.tceq.texas.gov/assets/public/hb610/index.html?lat=30.154166&lng=-98.08&zoom=13&type=r</a>

CHANGE IN LAW: The Texas Legislature enacted Senate Bill 709, effective September 1, 2015, amending the requirements for comments and contested case

hearings. This application is subject to those changes in law.

PUBLIC COMMENT / PUBLIC MEETING. You may submit public comments about this application. The TCEQ will hold a public meeting on this application because it was requested by a local legislator. The purpose of a public meeting is to provide the opportunity to submit comments or to ask questions about the application.

The public meeting will consist of two parts, an Informal Discussion Period and a Formal Comment Period. A public meeting is not a contested case hearing under the Administrative Procedure Act. During the Informal Discussion Period, the public will be encouraged to ask questions of the applicant and TCEQ staff concerning the permit application. The comments and questions submitted orally during the Informal Discussion Period will not be considered before a decision is reached on the permit application, and no formal response will be made. Responses will be provided orally during the Informal Discussion Period. During the Formal Comment Period on the permit application, members of the public may state their formal comments orally into the official record. A written response to all timely, relevant and material, or significant comments will be prepared by the Executive Director. All formal comments will be considered before a decision is reached on the permit application. A copy of the written response will be sent to each person who submits a formal comment or who requests to be on the mailing list for this permit application and provides a mailing address. Only relevant and material issues raised during the Formal Comment Period can be considered if a contested case hearing is granted on this permit application.

The Public Meeting is to be held:
Thursday, November 10, 2016 at 7:00 PM
Dripping Springs Ranch Park
Special Events Venue Room
1042 Event Center Drive
Dripping Springs, Texas 78620

OPPORTUNITY FOR A CONTESTED CASE HEARING. After the deadline for submitting public comments, the Executive Director will consider all timely comments and prepare a response to all relevant and material or significant public comments. Unless the application is directly referred for a contested case hearing, the response to comments will be mailed to everyone who submitted public comments and to those persons who are on the mailing list for this application. If comments are received, the mailing will also provide instructions for requesting a contested case hearing or reconsideration of the Executive Director's decision. A contested case hearing is a legal proceeding similar to a civil trial in a state district court.

TO REQUEST A CONTESTED CASE HEARING, YOU MUST INCLUDE THE FOLLOWING ITEMS IN YOUR REQUEST: your name, address, phone number; applicant's name and proposed permit number; the location and distance of your property/activities relative to the proposed facility; a specific description of how you would be adversely affected by the facility in a way not common to the general public; a list of all disputed issues of fact that you submit during the comment period and, the statement "[I/we] request a contested case hearing." If the request for contested case hearing is filed on behalf of a group or association, the request must designate the group's representative for receiving future correspondence; identify by name and physical address an individual member of the group who

would be adversely affected by the proposed facility or activity; provide the information discussed above regarding the affected member's location and distance from the facility or activity; explain how and why the member would be affected; and explain how the interests the group seeks to protect are relevant to the group's purpose.

Following the close of all applicable comment and request periods, the Executive Director will forward the application and any requests for reconsideration or for a contested case hearing to the TCEQ Commissioners for their consideration at a scheduled Commission meeting.

The Commission may only grant a request for a contested case hearing on issues the requestor submitted in their timely comments that were not subsequently withdrawn. If a hearing is granted, the subject of a hearing will be limited to disputed issues of fact or mixed questions of fact and law relating to relevant and material water quality concerns submitted during the comment period.

**EXECUTIVE DIRECTOR ACTION.** The Executive Director may issue final approval of the application unless a timely contested case hearing request or request for reconsideration is filed. If a timely hearing request or request for reconsideration is filed, the Executive Director will not issue final approval of the permit and will forward the application and request to the TCEQ Commissioners for their consideration at a scheduled Commission meeting.

MAILING LIST. If you submit public comments, a request for a contested case hearing or a reconsideration of the Executive Director's decision, you will be added to the mailing list for this specific application to receive future public notices mailed by the Office of the Chief Clerk. In addition, you may request to be placed on: (1) the permanent mailing list for a specific applicant name and permit number; and/or (2) the mailing list for a specific county. If you wish to be placed on the permanent and/or the county mailing list, clearly specify which list(s) and send your request to TCEQ Office of the Chief Clerk at the address below.

Citizens are encouraged to submit written public comments and public meeting requests must be submitted to the Office of the Chief Clerk, MC 105, Texas Commission on Environmental Quality, P.O. Box 13087, Austin, TX 78711-3087 or electronically at www.tceq.texas.gov/about/comments.html within 30 days from the date of newspaper publication of this notice or by the date of the public meeting, whichever is later.

**AGENCY CONTACTS AND INFORMATION.** If you need more information about this permit application or the permitting process, please call the TCEQ Public Education Program, Toll Free, at 1-800-687-4040. Si desea información en Español, puede llamar al 1-800-687-4040. General information about the TCEQ can be found at our web site at www.TCEQ.texas.gov.

Further information may also be obtained from City of Dripping Springs at the address stated above or by calling Mr. Robert Callegari, P.E., CMA Engineering, Inc., at 512-432-1000.

Persons with disabilities who need special accommodations at the meeting should call the Office of the Chief Clerk at (512) 239-3300 or 1-800-RELAY-TX (TDD) at least one week prior to the meeting.

Issuance Date September 23, 2016

Ms. Bridget C. Bohac Chief Clerk's Office (MC-105) Texas Commission on Environmental Quality (TCEQ) P.O. Box 13087 Austin, Texas 78711-3087

Re: Supplemental Comments on City of Dripping Springs's Application and TCEQ's Preliminary Decision and Draft Permit for Proposed TPDES Permit (No. WQ0014488003).

### Dear Ms. Bohac:

The Board of Directors of the Barton Springs/Edwards Aquifer Conservation District (District, or BSEACD) offers these supplemental comments on the TCEQ Executive Director's Preliminary Decision on September 23, 2016, to issue a Texas Pollutant Discharge Elimination System (TPDES) permit in response to the City of Dripping Springs's (City's) application to the TCEQ for such a permit (Permit No. WQ0014488003). This permit as drafted would authorize direct discharge of 995,000 gallons per day of treated wastewater into the Onion Creek watershed (Stream Segment 1427), in the recharge zone of the Trinity Aquifer and in the contributing zone of the Barton Springs segment of the Edwards Aquifer (Edwards Aquifer) with impacts occurring in the Edwards Aquifer recharge zone. These comments are made pursuant to and in conformance with Government Code Section 2003.047.

The District previously filed comments on July 6, 2016, and asserted its opposition to the City's application and the prospective permit as then proposed. It continues to have serious concerns with the lack of adequate protection of natural resources provided by the permit as now drafted.

<sup>&</sup>lt;sup>1</sup> The District maintains its position that it is an affected and interested party, and it reserves the right to amend and supplement these comments to the extent allowed by law.

The District's previously submitted comments are hereby re-affirmed, and its concerns and their basis are reiterated and supplemented below.

### Inadequate Protection of Receiving-Stream Uses

- 1. The effluent will degrade the quality of water in Onion Creek. TCEO's modeling of impacts of the discharge used a simple, uncalibrated steady-state model that is inadequate to delineate water quality impacts in this hydrologic setting for assessing water quality degradation. More sophisticated, calibrated dynamic modeling performed by the City of Austin<sup>2</sup> demonstrates that the nutrient additions to the receiving stream from the discharge as proposed under the draft permit will change the trophic state of the stream from oligotrophic to mesotrophic on a recurring basis, thereby substantially reducing its water quality during non-storm conditions by more than a de minimis amount, to the point that it impairs several designated uses of the stream. In contrast to TCEQ's findings upon its preliminary Tier 1 and Tier 2 reviews the City's proposed discharge is clearly and demonstrably inconsistent with TCEQ's Anti-degradation Policy. A properly conducted Tier 1 review would have shown that the uses of Onion Creek, as a public drinking water supply, as habitat for healthy aquatic life, and as a source of water-contact recreation, would be significantly and unnecessarily impaired by the effluent under the draft permit. A properly conducted Tier 2 review would have revealed the adverse effects of discharging effluent to the demonstrably high quality stream of Onion Creek. Algal growth associated with the change in trophic state from nutrient addition and the nutrient cycling that affects dissolved oxygen downstream will make Onion Creek from time to time less aesthetic, toxic to aquatic life, and less healthy as a fishable, swimmable stream. The causes of the degradation and impairment are also addressed individually in certain of the District's enumerated comments that follow. In addition, there are a number of "emerging contaminants" in the effluent that may adversely affect the water quality and possibly its supported uses. These emerging contaminants include pharmaceuticals, hormones, antibiotics, viruses, health care products, etc. and other constituents that are refractory during wastewater treatment and persistent in the aquatic environment.
- 2. The concentration of Nitrate-N will exceed drinking water standards in a public water supply. Dynamic modeling by the City of Austin described in its August 11, 2016, supplemental comments to TCEQ on the impacts of the City's direct-discharge on water quality in Onion Creek concludes, among other things, that nitrate-as-nitrogen concentrations will be higher than 10 mg/L at the western Edwards Aquifer recharge zone boundary for prolonged periods of time. That concentration of nitrate-N exceeds

<sup>&</sup>lt;sup>2</sup> The City of Austin included in its May 12, 2016, comments to TCEQ on the City of Dripping Springs's proposed permit a report summarizing the WASP model and the impact on Onion Creek. On August 11, 2016, the City of Austin provided TCEQ a supplemental analysis using the WASP model.

the 10 mg/L federal safe drinking water standard. This condition is inconsistent with both of the designated uses of Onion Creek for Public Drinking Water Supply and Aquifer Protection.

- 3. TCEQ's assessment of the sulfate concentration in influent water and the need for a sulfate limit in the effluent were inadequate. In view of the receiving stream's being listed as impaired for sulfate and therefore already not meeting that water quality standard, a more rigorous analysis of the influent stream to the prospective plant should have been made. An appreciable but variable portion of the water supply for Dripping Springs and therefore in the influent to the wastewater plant comes from the Middle Trinity Aquifer, which can have elevated sulfate concentrations; Trinity Aquifer-sourced water is not currently contributed to Onion Creek by any wastewater plant source. Sampling of the influent on a single day, which may have represented solely water from the Highland Lakes, could have been non-representative of the overall influent/effluent quality realized with respect to sulfate, especially since previous sampling has documented elevated sulfate in the influent.
- 4. Biomonitoring was not included as a permit requirement. Onion Creek has a high aquatic life use designation. There is strong evidence to suggest the nutrient loading and decreased DO levels resulting from the prospective discharge will have a detrimental effect on aquatic life. Considering that this portion of Onion Creek is classified as an intermittent stream with perennial pools and has limited capacity to assimilate nutrients and other contaminants, the draft permit should include biomonitoring requirements to assess both acute and chronic effects at 100% effluent.
- 5. The draft permit conditions are materially inconsistent with the water quality protection provisions in the directly comparable Hays County WCID No. 1 ("Belterra") direct-discharge permit that TCEQ issued (TPDES WQ0014293001). In the draft permit for Dripping Springs, the (a) absence of a Total Nitrogen effluent limit that requires more advanced wastewater treatment such as Membrane Biological Reactor technology, (b) lack of stipulated receiving-stream conditions before allowable discharge, and (c) absence of any effluent storage requirement that would reduce the frequency and amount of wastewater required to be discharged, all of which were part of Belterra's permit conditions, are serious deficiencies that will ultimately and unnecessarily allow for direct discharges that may harm water quality in Onion Creek. There is no apparent basis for protecting Bear Creek but not applying the same level of protection from discharges to Onion Creek. (See Attachment A Belterra/Dripping Springs Permit Comparison.) Absent prohibiting direct discharges, TCEQ should have considered that the level of protection afforded by the Belterra permit is a bare minimum for these oligotrophic Hill Country streams, so that their cumulative direct impacts and their indirect impacts from

increased erosion/sedimentation (fostered by more intense development served by a regional wastewater treatment plant) are minimized. This level of protection was found by the ALJ and adopted by the TCEQ's Commissioners in Belterra to be required for direct discharges to be in compliance with TCEQ's Anti-degradation Policy.

6. The uses of Segment No. 1427 of the Colorado River Basin are not being preserved with the draft permit. The designated uses for Segment No. 1427 are listed as follows: high aquatic life use, public water supply, aquifer protection, and contact recreation. The Notice of Preliminary Decision by the TCEQ executive director states that the effluent allowed under the draft permit will not impair the water quality and the existing uses will be maintained. The previous discussion related to the real potential for detrimental impacts to each of these uses clearly describes expected situations that are inconsistent with that conclusion. Additionally, Segment No. 1427 has been designated an endangered species habitat, and it is listed on the EPA's inventory of impaired and threatened waters. Given the sensitive nature of the receiving waters as designated on multiple levels, it is clear that direct discharge of the quality and loading allowed by the draft permit should not be authorized, or at a minimum should be minimized, which is not supported by the executive director's preliminary decision.

### **Inadequate Protection of Aquifer Uses**

7. The receiving stream provides recharge to the Trinity Aquifer in the immediate vicinity and downstream of the treatment plant. Completed and ongoing studies of streamflow gains and losses and of hydrochemistry are strongly indicative of hydrologic communication between Onion Creek and both the Upper and Middle Trinity Aquifers in the reach of Onion Creek receiving effluent<sup>3</sup>. The Middle Trinity Aquifer is a significant public water supply, including supplies for citizens of Dripping Springs and adjacent areas in the Hill Country. This major aquifer also extends downdip into the jurisdictional area of BSEACD, where it is used as a water supply. As noted above, the effluent may impair the stream that provides recharge, and therefore it may adversely affect these groundwater supplies under certain conditions, to some unknown degree. Phase II studies of the interaction between Onion Creek and the Middle Trinity Aquifer are ongoing. This next-phase study is designed to better characterize the magnitude of influence of Onion Creek recharge to the Middle Trinity Aquifer and therefore the relative risk to the aquifer as a drinking water supply. TCEQ should not issue any permit

In its July 6, 2016, comments, the District provided a technical report indicating recharge of the Trinity Aquifer from Onion Creek. That report has now been published: Hunt, B.B., A.S. Broun, D.A. Wierman, D.A. Johns, and B.A. Smith, Surface-Water and Groundwater Interactions Along Onion Creek, Central Texas: Gulf Coast Association of Geological Societies Transactions, 66th Annual Convention, September 18-20, 2016, Corpus Christi, Texas (Accessible at: http://bseacd.org/uploads/HuntEtAl 2016.pdf)

that would allow direct discharges to Onion Creek until the ongoing investigations confirm how the Middle Trinity Aquifer may be appropriately protected. Aquifer Protection is a designated use for Stream Segment 1427, and TCEQ's draft permit does not conform to this standard.

- 8. Elevated Nitrate-N concentrations at the Edwards Aquifer recharge zone boundary will enter the Edwards Aquifer as direct recharge and put this designated sole-source supply at risk. Once in the aquifer, little dilution or attenuation of elevated nitrate (see Comment 2 above) may occur before it is withdrawn by public and private wells within the District and by discharge at Barton Springs. More than 60,000 Central Texans within the District rely upon the Edwards as a water supply and value its high quality, and many consider that groundwater a property right to be protected. The lack of a Total Nitrogen limit, even with (and perhaps because of) a lower Ammonia-N limit, will increase the Nitrate N concentrations to levels that exceed safe drinking water standards in the receiving stream and in the aquifers that it recharges within the District.
- 9. The District has a statutory obligation to protect recharge quality under its governing Texas Water Code Chapter 36. Discharge of wastewater to Onion Creek under the terms of the draft permit would demonstrably not be protective of recharge water quality, and therefore may cause "waste" (as defined in Texas Water Code §36.001) requiring extraordinary action by the District to oppose and/or compel modification of the permit. A permit that reasonably provides such protection of groundwater recharge and its use may not.
- 10. Degraded water quality in the Edwards is inconsistent with the protection of the endangered species that reside in the Edwards Aquifer and are dependent on high water quality. The District's endangered-species draft habitat conservation plan (HCP) measures, which are already part of its Management Plan and will soon become part of its prospective Incidental Take Permit (ITP) from the U.S. Fish and Wildlife Service (USFWS), require it to minimize the amount of take of two endangered species of salamander that may occur as a result of the District's activities. As required by its HCP, the District must protect the Edwards Aquifer from risk of potential contamination to the extent feasible and therefore it opposes a direct discharge that may unreasonably and unnecessarily impair water quality in the Edwards Aquifer that could compromise the habitat of the two endangered species of salamander. It should be noted that the prohibition on take of an endangered species is a federal requirement that applies to any entity in the U.S., public or private. The discharge of wastewater by the City under TCEQ's draft permit provisions could reasonably be considered as producing unauthorized take, which in turn could require its own ITP and HCP, or at least a consultation and agreement with the USFWS, to allow such action to occur legally. The

District has not been apprised that this communication has occurred, as necessary to assess impact of the draft permit on the efficacy of the District's or the City of Austin's HCP and their respective conservation measures and recommend responsive actions by the FWS concerning the draft permit.

### **Inadequate Treatment Technology to Achieve Effluent Limits**

- 11. The proposed four-stage Bardenpho treatment train is not designed to be able to meet the effluent limits in the draft permit. The proposed four-stage Bardenpho process may have the benefit to the City of being inexpensive but it is incapable of meeting the effluent limitations in the draft permit, so it is isn't feasible and shouldn't be considered further. The City has not specified what it intends to use in lieu of the Bardenpho process, but that is a key element in the City's ability to avoid impairing the water quality in Onion Creek. Even a Modified (five-stage) Bardenpho will not reliably achieve the Phosphorus effluent limit specified in the draft permit (and would produce much larger volumes of sludge attempting to minimize Phosphorus), so another technology is required. It should be noted that a Membrane Biological Reactor (MBR) was specified and utilized in Belterra, and therefore could be a rational choice that provides an acceptable level of effluent treatment under certain conditions. Further, an MBR may be a cost-saving front end to a Direct Potable Reuse system when compared to a Bardenpho front-end, and thereby promote use of DPR, which the City professes to want as a future water supply. In any event, a substantive change in the proposed treatment technology is required, and it is such a significant deviation from the basis of the TCEQ's Notice and Preliminary Decision that the regulatory process should be reinitiated to ensure adequate and appropriate analysis by both TCEQ and the public as to the City's ability to comply with the more stringent standards than it originally proposed.
- 12. The phasing of the authorized volumes in the TPDES permit is inconsistent with the City's stated construction plans. Until a new unit with all of the new technology is operational, which has been specified to have a treatment volume of one-half of the ultimate amount, or 497,500 gallons per day (gpd), the City will be unable to meet the effluent limits in the TPDES permit for direct discharge. So the specification of an initial permit phase for 399,000 gpd is unnecessary. A TLAP, not a TPDES permit, would be required as the alternate effluent disposal method under Section 210 to permit that Phase 1 amount, as direct-discharge would not then be allowable. So a TPDES permit phase of anything less than 495,000 gpd, under the current construction plan, is not warranted as its discharge limitations aren't achievable. The second half of the ultimate amount, i.e., the other 497,500 gpd, will be provided by the conversion of the existing plant to a twin of the one treating the first half, so it isn't available for a Phase 1. It seems like only two

TPDES permit phases are needed or supportable, under the current construction plans. But the City would need to acquire a new TLAP for disposal of the Phase 1 amount if such a volume is required to be treated before the new plant is constructed.

- 13. Specification of a Class C operator for a complex treatment plant in this setting is inappropriate. Regardless of what treatment technology is ultimately employed, this will be a complex facility to achieve the requisite removals to protect a sensitive stream on a sustained basis, so an experienced Class A operator should be a specified requirement. Further, the complexity of the plant's daily and hourly operation will require a robust SCADA instrumentation and control system, which also should be a specified permit term to avoid/minimize upset conditions and ensure water quality protection at all times.
- 14. The draft permit does not consider the extraordinary impact of upset conditions that accompanies approving direct discharge. "Upset" conditions from a wastewater treatment plant where poorly treated and even untreated wastes are released are historically proven to periodically occur. The poorly treated or untreated sewage resulting from these periodic upsets could have immediate and lasting effects on Onion Creek, the Trinity Aquifer, the Edwards Aquifer, and even Barton Springs. True upset conditions were not considered in TCEQ's evaluation or in the City of Austin's modeling evaluations, but reasonable extrapolation of the results indicates that such conditions would certainly degrade the overall surface and groundwater quality. The presence of an outfall makes the adverse impacts of upsets, especially over time, easily conveyed off-site via the receiving stream, rather than contained and mitigated with on-site or in storage. Once such a discharge enters an aquifer, the pollutants from the off-spec effluent would not benefit much from dilution or assimilation, especially during low water-level conditions and may have detrimental and long lasting effects on the receiving stream and the aquifers.

### Inadequate Minimization of Effluent Volumes to Be Direct Discharged

15. No required storage is specified in the draft permit. Other than incidental storage provided by the treatment process units, the draft permit has no requirement to store effluent, which hinders the ability to avoid direct-discharge if re-use is immediately or temporarily unavailable. This absent requirement maximizes the amount of wastewater to be discharged regardless of other conditions. If TCEQ is unwilling to specify minimum streamflow conditions as a prerequisite for direct discharge in the permit (as it did with Belterra), then it should require the City to perform a comprehensive water balance and specify an appropriate storage volume that would maximize re-use and

minimize direct discharge frequency and volume. This permit-mandated storage could be on-site, distributed off-site, or a combination, at the City's discretion.

16. Direct discharge frequency and volumes could be minimized by including minimum storage requirements and commitments to firm-demand beneficial reuse as conditions of the permit. As described by City officials, the City has contracts for reuse of its effluent for spray irrigation that are non-recourse: the contracted entities are required to take the effluent at the volume contracted, if the City can't otherwise utilize it or dispose of it. These entities would accordingly need to have their own storage facilities to provide the necessary buffer. Such distributed storage likely obviates the need for direct discharge to these sensitive streams except under rare and specified conditions, as is the case with Belterra. (Section 210 authorizations could specify a requirement for defined volumes in each of these distributed locations; the TPDES could specify the aggregate amount.) TCEQ should require the TPDES permittee to have access to and mandate the use of enough aggregate storage (and/or TLAP-permitted subsurface irrigation) to avoid or minimize direct discharge of wastewater and allow it to be a last resort as the City proclaims to intend, rather than a first resort and/or at the sole discretion of the permittee.

### Conclusion

For the reasons set forth above, the District concludes that TCEQ has in fact <u>not</u> met its acknowledged burden to issue a draft permit that (a) meets all state and federal legal and technical requirements, and (b) protects human health and safety, the environment, and physical property. Further, the draft permit lacks the provisions of the comparable Belterra TPDES permit that were previously determined as required to prevent degradation of a receiving stream similar to Onion Creek beyond a *de minimis* level. No rationale for this difference was provided in the record, therefore, the District reasonably concludes that the draft permit does not comply with the TCEQ's Anti-degradation Policy.

The District therefore requests that TCEQ reconsider its Preliminary Decision and its draft permit by revising its preliminary anti-degradation review and amending the draft permit to include the necessary provisions that are protective of the existing and future uses and users of the receiving stream compliant with the TCEQ's Anti-degradation Policy. The District is pleased that TCEQ is holding a public meeting on this matter, which will help ensure the local public is aware of both the City's proposal and the possible and likely impacts of TCEQ's decision-making on the surface water and groundwater, and that the public is better informed to timely comment on them. However, if the District's concerns remain substantially unresolved, the District also intends to formally request a contested case hearing on the draft permit following TCEQ's response to comments.

The District continues to stand ready to assist the applicant and TCEQ in this endeavor. However, it also stands ready now to pursue the necessary protective measures through other means, if required.

Respectfully submitted

John T. Dupnik, P.G. General Manager

COMPARISON OF TPDES PERMIT PROVISIONS: BELTERRA AND CITY OF DRIPPING SPRINGS

# Comparison of Permit Provisions on Direct Discharges in Edwards/Trinity Contributing Zone

|     |  | Belterra Draft<br>TPDES Permit<br>(before settlement)  | Belterra Final<br>TPDES Permit<br>(with settlement terms)  | Dripping Springs Pre-<br>Draft TPDES Permit   | Notes/Comments on D/S<br>Pre-Draft Permit  |
|-----|--|--|--|---|--|
| +i  | TPDES Permittee  | Hays County WCID No. 1   | Hays County WCID No. 1   | City of Dripping Springs  |  |
| 7.  | Permit<br>Term/Renewal                                     | Standard 3-year term;<br>upon notice/application,<br>auto renewal if no<br>changes/non-compliance  | Standard 3-year term;<br>upon notice/application,<br>auto renewal if no<br>changes/non-compliance  | Term now ends 9/1/2019, which is close to start of new WWTP operation; auto renewal if no changes/non-compliance      | D/S requesting delayed<br>start of permit term   |
| เล้ | Receiving Stream   | Bear Creek main stem,<br>immediately below<br>Belterra development   | Bear Creek main stem,<br>immediately below<br>Belterra development; no<br>direct discharge known to<br>have yet occurred                       | Walnut Springs Creek,<br>thence to Onion Creek<br>main stem   | About one-half mile of wastewater flow in Walnut Springs Creek, nearly all within Caliterra development  |
| 4   | Outfall Location   | Recharge zone of Upper<br>Trinity and possibly Middle<br>Trinity; contributing zone<br>of Edwards, 8 miles<br>upstream of its recharge<br>zone | Recharge zone of Upper<br>Trinity and possibly Middle<br>Trinity; contributing zone<br>of Edwards, 8 miles<br>upstream of its recharge<br>zone | Recharge zone of Middle and Upper Trinity; contributing zone of Edwards, about 19 miles upstream of its recharge zone | Direct Onion Creek<br>recharge to Middle Trinity<br>indicated, quantity and<br>conditions for recharge not<br>yet confirmed  |
| rų. | Discharged Effluent<br>Volume, Final Daity<br>Average Flow | Up to 500,000 gpd  | 350,000 gpd permitted for<br>direct discharge  | 995,000 gpd   | Timing issue: Initial permit phase for399,000 gpd will be before new plant unit is complete to achieve the direct-discharge effluent limits and therefore will require modification of existing TLAP. Second |

| L        |                                   | Belterra Draft<br>TPDES Permit<br>(before settlement)                          | Belterra Final<br>TPDES Permit<br>(with settlement terms)  | Dripping Springs Pre-<br>Draft TPDES Permit  | Notes/Comments on D/S Pre-Draft Permit  |
|----------|-----------------------------------|--|--|--|---|
|          |                                   |  |  |  | phase of 497,500 gpd will use new unit that will nominally be able to achieve limits  |
| ý        | Effluent Limitations <sup>4</sup> | Initially, 5-5-2-1, no Total N<br>limit. TCEQ later changed<br>TP to 0.15 mg/L | 5-5-2-0.15, with Total N of 6 mg/L. Total P of 0.3 mg/L (rather than 0.15 mg/L) when discharge 2 or fewer days/month. Nominally this would comply with Antidegradation Policy, per SOAH finding        | 5-5-1.2-0.15, without Total<br>N limit; no Sulfate limit.<br>TCEQ says this complies<br>with their Antidegradation<br>Policy | TCEQ says possibly elevated sulfate source in influent is not problematic; D/5 originally requested a 5-5-2-0.5 and 5 mg/L DO. D/5 requesting a conditional 0.3 mg/L Total P similar to Belterra. |
|          | Treatment<br>Technology           | Membrane Bioreactor  | Membrane Bioreactor with Denitrification; specifies UV for disinfection unless better available; all wastewater to be treated with MBR and denitrification regardless of intent to direct-discharge it | Four-stage Bardenpho, with external carbon and alum addition; uses less ecologically sound Chforine for disinfection         | D/S treatment train based on its requested limits, not as proposed. Bardenpho cannot achieve 0.15 mg/L P reliably   |
| <b>∞</b> | WWTP Operator<br>Licensing        | Class C  | Class A  | Class C  | Bardenpho with various proposed chemical additions needs both a SCADA and a Class A operator  |
| တ်       | Storage<br>Requirement            | Yes; on-site impoundment<br>for hydraulic equalization                         | Yes; on-site 5.25MG (15 days) lined pond or tank plus additional 1.75 MG (5  | None   |   |

<sup>4</sup> For Carbonaceous Biochemical Oxygen Demand (5-day) – Total Suspended Solids Ammonia-Nitrogen – Total Phosphorus, respectively, in mg/L on a 30-day average basis. All have same Coliform and DO limits. For D/S permit, only final-phase limits are shown; interim-phase limits for N are somewhat higher.

|                   | Belterra Draft              | Belterra Final   |                             |                             |
|-------------------|-----------------------------|--|-----------------------------|-----------------------------|

| 13. TPDES Permit  | now via online eyetem at    | TCEQ, of Average Daily and   | Max Grab results of all     | engineering reports only    |
| Reporting         | TCFO of Average Daily and   | Max Grab results of all  | sampling; Before startup,   | if/as requested by TCEQ.    |
| Requirements      | Max Grab results of all     | sampling; Permit holder  | City must submit final      | rather than as a mandatory  |
|                   | sampling.                   | must share all monitoring  | engineering reports, plans, | permit                      |
|                   | 9                           | reports with parties to  | and specs to clearly show   | provision/requirement       |
|                   |                             | settlement   | how treatment process will  |                             |
|                   |                             | The state of the s | be able to meet applicable  |                             |

|  | Belterra Draft  | Reiterra Final   |  |  |
|--|---|--|--|--|
|  |   | TPDES Permit   | Dripping Springs Pre-  | Notes/Comments on D/S  |
|  | (before settlement)   | (with settlement terms)  | Dran IPDES Permit  | Pre-Draft Permit   |
|  |   |  | effluent limits  |  |
| 14. Mandated Monitoring Studies and Responses to Outcomes <sup>5</sup> | None.   | Ongoing instream WQ monitoring, to be paid by Permit holder for first 18 months following first discharge and by other parties thereafter, and statistical analysis that triggers specific defined remedial actions <sup>6</sup> by the Permit holder if agreed protections are not achieved | None volunteered by D/S. TCEQ requiring effluent analysis of Nitrate-N within 90 days of startup, to assess need for Nitrate-N effluent limits/monitoring                            | D/S requesting that effluent sampling and analysis for Nitrate be done only when the plant is treating effluent at quality required for direct discharge. D/S requesting that N and P effluent monitoring only be required during direct discharge |
| 15. Supporting Water<br>Quality Modeling<br>Studies                    | Preliminary generic QUAL-<br>TX modeling of DO under<br>steady state conditions<br>without nutrient cycling | Extensive DO and ecological modeling provided by multiple parties before and after permitting/settlement   | None known in support of permit application. COA's dynamic WASP modeling demonstrates change in trophic status in Onion Creek and elevated Nitrate at Edwards recharge zone boundary | D/S appears to assume<br>that asserting they will<br>meet effluent limits is all<br>that is required   |

<sup>5</sup> In addition to standard required effluent monitoring and reporting \* Remedial action is to 1) construct an additional 1.75 MG (5 days) storage or 2) reduce effluent by equivalent amount.
