RE: **Administrative Completeness Review of Well Modification Applications** submitted by Electro Purification LLC, for authorization to permanently complete seven (Bridges Wells No. 1, 2, 3, 4 and Odell Wells No. 1, 2, 3) previously drilled test wells proposed to produce from the Middle Trinity Aquifer.

Dear Mr. Tim Throckmorton:

The above referenced application and the subsequent additional information submittal have been received and reviewed and have been determined to have sufficiently addressed the information requirements in accordance with District Rule 3-1.4(A). **Therefore, the application is determined to be administratively complete as of January 31, 2018.**

In an effort to improve the administrative efficiency of the public notice and comment processes, the District will agree to your request, as stated in your 1/31/18 correspondence, and allow the applicant to delay the publication of notice regarding the well modifications. Since both applications are part of a single well field for the same project, the District will allow for the public notification of both the well modifications applications and the production permit application to be synced, such that the applicant will only need to publish a single combined notice for all the referenced applications. This will reduce confusion for the public and reduce the duplication of efforts related to the project.

Once the District has determined the production permit application to be administratively complete, the District will notify the applicant of that determination and the applicant will be directed to publish the prescribed notice of the two permit applications as a single notice using the text and format approved by the District.

If you have any further questions or need clarification regarding the requested information, please feel free to contact my office by phone at 512-282-8441.

Sincerely,

Kirk Holland, P.G.  
Interim General Manager
